OSGAR WILDE.

The Arrival of the Poet in Bos ton Yesterday.

A Conversation in Mr. Boucicault's Parlors.

His Thoughts About Art and a Poet's Life.

Mr. Oscar Wilde arrived in Boston ; after an all-night railroad journey bany, and went straightway to the

NEWSPAPER EXPERIENCES.

"said air. whue, gipt, you know." suppose you have had all sorts of excess with newspaper men?" remarked uller, feeling that he might be apprehengarding the results of the present visit. es, some of them have been very tedious, some others have succeeded in being annusing. I was dressing on night, when the card of a person; on the card

n should take a drive out through the com-ywhile in Boston."
Oh, yes, that I certainly shall have to do."
Shall you be here in the summer?"
I never have any plans in seeing a country; hen it pleases me I stay, and go away when ceases to please me. I should like to be to in the time of flowers."
"They are very beautiful."
"They are very beautiful."
"The American elm, maple, beech; also the rubeam and the birch. These are among e principal deciduous trees."
I wonder if we have the hornbeam in Eng-di, perhaps we call it by a different name, int is it like?"

ry graceful tree. It rises up about ry graceful tree. It rises up about and then droops over, something g willows, or a fountain." ber of reading in William Morris' he hornbeam, when I was a boy much puzzled to know whether it

sctive in thought and deed. "In Washington, said be," I saw much of your leaders in polities, and visited in their houses, among them Mr. Blaine. Your American politics are a little difficult for us to understand, on account of the names of the two parties. Republican and Democratic. In Europe we have a greater difference in names. There they are the Constructive and Liberal."

"The origin of America was in democracy and in Europe it was centralization," said Mr. Roucicault, "and the tendency in America is from democracy to centralization, while in Europe it is the other way, from centralization democracy."

"The Parlandi it is a class interest that subdi-

Smith money as your magnates; that is, so much cash. Tay Gould, for instance, who buys ball a dozen railroads or so about every day, or sells them."

"The moneyed interests are more solid in languard, because the wealth is in the land, which has a fixed value; and not in stocks, which has a fixed value; and not in stocks, and the sell of the great values in England are in land, which has a fixed value."

"And not in Ireland," remarked Mr. Boucicall; "that has a very unfixed value."

"In Wilde was saked if he had

canti, "that has a very unfixed value."

Mr. Wide was saked if he had

THOUGHTS ABOUT ART,

"swelt on a school of design in Philadelphia," said he. "I saw a young lady occapied in painting a monlight landscape on a large piacque. Now a landscape, and above all, a moonlight scene, should never be painted as a placque, or any round surface, but on causes or paper. The surroundings of a whool of design ought to very beautiful. It is quite impossible to expect the designer to exceed beautiful designs in a whitewashed from with bare windows."

"Have you ever noticed one peculiarity of the studies of different artists? While the iportrait painter or figure painter will generally have his studie perfectly bare, as if he were not dependent upon his surroundings?"

"Yes, but I think the true way for all artists

study the landscape painter will have his studio perfectly bare, as if he were not dependent upon his surroundings?"

"Yes, but I think the true way for all artists to work is with the most beautiful surroundings at the second of the second

upon delicate proportions. The Parthenon in Athens, is most beautiful, and the Madelaine, which is a copy of the Parthenon, is most aboniushis."

which is a copy or the random, is most abcominable.

"One is sesticatic proportion and the other is not," said Mr. Boucicauli.

"No people went into the question of proportion as fully as the Greeks. There was a lime in England, and the second of greece, when the Greeks is the control of greece, where there is the sum of the control of the was and the control of the most ordinary purposes, is beautiful. Then came the Puritan movement and destroyed all the artistic impulse. We are just beginning to recover from Puritanism in England."

"And we are also beginning to recover from the same in New England."

the same in New England."

"I am also a great admirer of the Japanese, of eastern art especially, in which there is a most delicate sense of the beautiful, but I object to the predominance of the grotesque. A people which has such an exaggerated sense of the grotesque is generally found not to have a love for the wonderful beauty in the human face and form."

love for the wonderful beauty in the human face and form."
"Does not Mr. Ruskin ignore too much to beauty of the human form? Mr. Poynter, one of your leading British painters, makes that charge acainst him."
"Yes; I know all sorts of things are said against Mr. Ruskin, but it is better to read what men have to say for themselves rather than what is said against them. Mr. Ruskin has an exquisite sense of the physical beauty of man. In the opening part of "McGdern Faint-

have seen the most beautiful women?"
"In London, I think. You know all things naturally come to London, and thus the finest examples of beautiful women may be found in London. Here in America I find a vast "setty women, and the greates!"

nine beauty there!"

POETS AND THETE WORK.

"Do you know," said Mr. Wilde, "that the greatest fault I have to find with you Americans is that you a cosmopolitan, and with you americans is that you a cosmopolitan man of whom it can be said, He is eatirety the product of American conditions."

"You will find that in Walt Whitman," was suggested; "have you met Walt Whitman," was suggested; "have you met Walt Whitman," "Indeed I have," said Mr. Wilde, his face kindling with entimenasm. "I spent the most charming day I have spent in America with him. He is the grandest man I have ever seen. The simplest, most natural, and strongest character I have ever met in my life. I regard him as one of those wonderful, large, entire men who might have lived in any age, and is not peculiar to any one people. Strong, true and perfectly sane; the closest approach to the Greek we have yet had in modern times. Probably he is dreadfully misunderstood. If people would only know that no artist lives for praise; he only wants one thing, to be understood. I hope that America will not treat its great poets as England too often has lived in France, in as Singland artists there, but in Mandalland and they not only expect them to look to poed.

people. "All America naturally takes a great interest in what is done in England, as is natural," said Mr. Wilde, "for England is the mother of this country. I come here with a desire to tell you what the artists of England have been trying to do, for, of late, they have been done some things which, I think, are worthy of telling about. It is on this account that I have prepared my lecture."

amine the wonderful remains of its ameient ant. But one never sees a country by passing through its by railway. By racing through the country as we all do no one sees anything of it. The true way to see a country is to rade through it. I enould like to ride through Mexico. I rode through Greece once; rodo through the Peloponnessus; saw every little hill and tree, and knew it all. I want very much to see some of your Indians, to see mey who spend all their life in the open air. I want to see how they carry themselves."

"Have you noticed particularly our domestic architecture?"

MEMOIRS OF OLD FRIENDS

Extracts from the Journals of Caroline Fox.

Reminiscences of Mill and Carlvie.

Oscar Wilde Only an Imitator in Dress Reform.

New York, Jan. 28, 1882. Just as we had along comes one of the most interesting volumes that it has given birth to. This sumption book, with its large type and wise margins, a made up of extracts from the journals of Caro line Fox of Penjerrick, Cornwall. At present it is on Penjerrick book being mid-liked in London. of them more entertaining than these extracts from the journals of Caroline Fox. A pleasant introduction by Mr. Horace Pym tells us that Caroline was a member of that distinguished

the day, that they are telling in the land."
as Fox became very friendly with the Caries and paid them a visit. The philosopher,
o wri...3 on her arrival, "looks thin but well,
d is recovering from the torment of the 30
w Cromwell leiters; he does not mean to
to in any fresh ones on any terms." It
ems that

OSCAR WILDE IS ONLY AN IMITATOR,

Seems that

OSCAR WILDE IS ONLY AN IMITATOR, after all, with his dress reform. Carlyle was very much down upon the fashion of his day. He said to Miss Fox: "I have often wished! I could get any people to join me in dressing in a rational way. In the first place, I would have nothing to do with a hat; I would kick it into the Serpentine, and wear some kind of a capter's stawned to be a serious of the country of the stawned to be seen to be a light was been at least of the serious of the serious buttoning would be difficult; and over all a blouse." Mr. Wilde's costume has a little more picturesqueness in it than this; but it is not much less conspicuous.

From London to Genera Miss Fox travels as easily as she writes. In the latter city she called on Merle D'Auoigné, and was "interested by his beautifully curved lips and strong, self-asserting look and manner." In Geneva she made the acquaintance of two American ladies, and was "very much pleased with them." Then comes this bit of home gossip: "Mary Ashburnham, alias Fanny Appleton, was a near neighbor and friend of thoirs—a most beautiful girl whom 20 gentlemen was a near neighbor and friend of thoirs—a most beautiful girl whom 20 gentlemen to the search of the capter of the capt

THE WEATHER.

Indications for Today.

WASHINGTON, D. C., Jan, 29, 1832—1 A. M.
For New England, light snow orrain, followed by colder, clearing weather, northwest to southwest winds and rising barometer.

Special Bulletin.

WASHINGTON, D. C., Jan. 29, 1882—1 A. M. A storm of considerable energy has moved over the lake region during the day, and is now central in the lower St. Lawrence valley. The cold wave which appeared in the Northwest, vesterday morning has ad-Northwest, yesterday morning, has ad-vanced toward the Atlantic coast, causvanced toward the Atlantic coast, causing much colder weather in the upper lake region, the Northwest and thence southward to Texas. Tonight the temperature is from 10° to 30° below zero in Minnesota. Rain has prevailed in the southern and middle states, and rain or snow in New England, and fair weather is reported from the lake region and Northwest. Southwest to northwest winds prevail in all districts east of the Mississippi. The indications are that fair weather will prevail in the middle states, the lower lake region and clearing weather in New England during Sunday, with much colder weather during Sunday, with much colder weather

weather is also indicated for these district during Monday. Yesterday's Observations in Roston.

THAT AWFUL FURNACE.

How to Keep Warm in Bitter Cold Weather.

Instructions for Building and Managing Fires.

The Doors, Dampers and Cold-Air Box.

ple are after, and it is a valu delusion to be derbitt's millions and his magnificent new pal-ace have been to him, last Tuesday, if there had been a breach or defective connection in past week. Though not so suddenly destruc-tive of domestic peace, yet the imperfect or improperly operated furnace is even more embarrassing and annoving than a house improperly operated furnace is even more embarrassing and annoying than a bursted water pipe. The one can be avoided by simple precautions, and, when carelessness has permitted a sudden deluge, the remedy can be found at the nearest plumbing establishment. But, to successfully manipulate and bring out the hidden powers and virtues of a modern furnace is something that is arbeit, because the where the number is in the least cranky, and where there is an absence of kill or experience in managing it. Coal mough to run a Cunard stamship may be shovelled in, but there is still the same chilling amperature throughout the dwelling, and apparently no diminution in either the frequency or amounts of the doctor's bills, or those of his possibly surreptitious partner in the corner

ade, and it was not of coal contring over the amount of coal contring over the amount of coal contributed by a furnace was worth the trouble of cekoning. The Berkeley stove, however, was a discovery by which a continuous fire an be kept up with a moderate consumption of fuel. The old-fashloned firepiace of our days was probably more cheer-

clear from clinkers, ashes and cinders. This can be secured by shaking down once or twice in the course of 24 hours—say every night and morning. Great quantities of ruel are but necessary to obtain great results, except in very cold weather, like that which was experienced several days ago. The idea to be observed is a thin body of coal and slow combaction, all of which is easy enough with a little care, and the knowledge which must come from a brief experience.

principal living rooms. Beside contributing largely to the general pleasure, health and comfort of the family, this combined arrangement, under the care of a compotent man or woman, would be an actual saving in the matter of fuel. Those who have tried the experiment do not hesitate to pronounce it preferable to any other mode of healting. In bitter cold weather, as has been intimated, the draughts should be opened, and the fire allowed to burn freely until the heat has conquered the cold in the house, after which the dampers can easily be regulated to maintain the ascendancy of the heat over the cold. A common mustake in replenishing fires is heaping up a large quantity of coal on top of an old bed which has not been properly shaken down, thus allowing the slag and ashes to remain in the fire pot, and filling it up to the exclusion of fresh incandescent fuel. Shake the fire down well, so that it will show bright under the gravite, but do not get on too much of a depth of coal when

THINGS ARE TO BE WORKED LIVELY.

It is generally a mistake to get too large-sized coal. The fire rives leas heat if the coal is too

TRINGS ARE TO BE WORKED LIVELY.

It is generally a mistake to get too large-sized coal. The fire gives less heat if the coal is too large, and, on the other hand, it clogs up it the lei is too small. The size of the coal should be in accordance with the furnace. It would be mise for every person who has the caro of a furnace to send to the maker for printed instructions for the use of that particular furnace, and then follow them to the letter. The instructions are worth repeating, that, in homes where several rooms are to be warmed at the same time it can be about the doors of these accommons oven income and also into the main half of the house. As to the other methods of warming—such as by the water and steam—they are chiefly used in spacious public buildings and large manufactories. Steam heating, when properly and understandingly applied, is probably the best agency yet discovered for driving Jack Frost out of this class of buildings.

THE EVENING HIGH SCHOOL. Organization of Classes and Progress
During the Week.
The large registration in phonography for the classes in the evening high school clear shows the demand for the shorthan shows the demand for the shorthand amanuous in business, as well as professional circles, there being already 123 applicants, about one-sixth of the school, some 25 per cent. of whom are voung ladies. The classes, which will be graded on Monday evening, will probably begin their regular work the following evening, after which time no new applicants for shorthand will be considered the present term, it being the digit of the transagement to make the strictest and highest professional standard. Next to phonography, the conversational French class, which was opened for the first time in the evening high school on Tuesday last, promises to be both of great advantage to the pupils and a most practical and important feature in the selool, two hours each week and others making French a special stud of the several prominent educators at visitors present on Friday erenin were Mr. Clapp of the Advertiser, Mr. Claps of the Advertiser, Mr. W. Sanderson, the water color artism. Peabody of Kidder, Peabody Co., Mr. C. C. Perkins, Hon. George I. Hobbs, Charles H. Reed and Georg B. Hyde, the last four gentlemen being men bers of the school beard, all of whom we apparently delighted with the character of the class of the school beard appearance as management of the school.
